Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims 1-27 have been considered but are moot in view of the new ground(s) of rejection.

Claim Objections

2. Claim 1 is objected to because of the following informalities: "at an emergency service entity' in line 6 should be changed to --at the emergency service entity--.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-5, 8-27 are rejected under 35 U.S.C. 102(b) as being anticipated by Zicker (6,038,437).

Regarding claims 1, 4-5, 8, 10-14, 17-18, and 21-24, Zicker discloses a call-back method in response to emergency call origination from cellular radiotelephone, comprising:

receiving, at an emergency service entity, a wireless call back number from a mobile station controller serving the at least one wireless unit, the wireless call back number corresponding to least one tag identifier (see abstract, fig.1, wireless unit 20, mobile station controller 33, emergency service entity 36, fig.6, wireless call back number 100, tag identifier 107, col.6, lines 38-40);

receiving, at an emergency service entity, the least one tag identifier from a public safety answering point call center in response to the emergency call from the at

least one wireless unit_(see fig.1, wireless unit 20, emergency service entity 36, public safety answering point 38, fig.6, tag identifier 107);

transmitting, from the emergency service entity, to the public safety answering point call center, the wireless call back number corresponding with the at least one tag identifier in response to receiving the at least one tag identifier (see abstract, fig.1, emergency service entity 36, public safety answering point 38, fig.6, tag identifier 107).

Regarding claims 2, 15-16, 19,-20, and 25-27, Zicker further discloses the at least one tag identifier comprises a reference key to a database (see fig.4, element 76).

Regarding claims 3, and 9, Zicker further discloses the database comprises at least one of an emergency call register and an emergency service entity (it is inherent for the in PSAP emergency call register).

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 6-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Zicker (6,038,437).

Regarding claims 6-7, Zicker discloses all subject matters described in rejected above except for transmitting location information associated with at least one wireless unit, the location corresponding with the at least on tag identifier. However, these feature is well known in call-back in response to emergency systems Thus, it would

have been obvious to one having ordinary skill in the art at the time the invention was made to use these well-known features in Zicker's invention in order to improve and locating the victim who is calling for help.
